

GAME DESIGN DOCUMENT

Game Name:

LuchaDog – Toon Duel

Genre:

Real-time 1v1 PvP arena fighter (mobile).

Game Elements:

Game elements are the basic activities the player will be doing for fun

- Moving around a small forest arena with a joystick (spacing, approach, retreat, strafe).
- Throwing short melee punches with anticipation, strike, and recovery phases.
- Dashing for gap-closing or dodging, with brief invulnerability frames.
- Drinking a healing potion to recover HP under pressure.
- Summoning a Pet (Flame Imp) companion that fights alongside the player.
- Reading the rival, baiting attacks, and managing cooldowns under a 30-second clock.

Player:

The number of players that can play the game at once

Online multiplayer. On player per phone, but match requires 2 players (1 vs 1). One human control the bottom fighter; the opposing fighter is another human in online matchmaking, or an AI bot in practice mode.

TECHNICAL SPECS

Technical Form:

Basically, there are 2D graphics (flat) and 3D graphics (form)

2D graphics (flat). Hand-drawn cartoon aesthetic with thick ink outlines, rubber-hose animation, and exaggerated squash-and-stretch motion.

View:

Camera view from which the player will experience the game

Fixed slightly top-down / three-quarter view. The camera never pans, zooms, or transitions during gameplay. The full arena is always on screen. The player is always at the bottom of the screen; the rival is always at the top.

Platform:

iOS, Android, Mac, PC

iOS. Portrait orientation only.

Language (programming):

Willing to let lead engineer decide

N.A,

Device:

PC, Mobile, Console

Mobile (touchscreen, portrait).

Joystick Configuration & Layouts — Summary

Joystick type: Floating virtual joystick. It lives in a designated activation zone (e.g. bottom-left of the screen). When the player touches anywhere inside that zone, the joystick spawns at the touch point and becomes the input center. Thumb drag = directional input; thumb lift = joystick fades back to ~40% opacity and re-anchors.

Directional input: 8-way detection (up, down, left, right, plus four diagonals). Diagonals are non-negotiable for a fighter — they're required for command inputs like quarter-circle forward and half-circle back.

Dead zone: ~15% of the outer ring radius registers no input. Prevents drift / accidental moves.

Performance target: <50ms latency from touch to in-game action. Add input buffering (a short queue window) so combos feel responsive.

Layout swap (the double-arrow button): One tap mirrors the entire HUD across the vertical axis. No settings menu, no friction. Player's choice persists across sessions via local storage.

Element	Layout A (right-handed, default)	Layout B (left-handed, mirrored)
Joystick zone	Bottom-LEFT	Bottom-RIGHT
Action buttons	Bottom-RIGHT	Bottom-LEFT
Menu button	Mid-RIGHT edge	Mid-LEFT edge
Swap button	Bottom-RIGHT corner	Bottom-LEFT corner

JOYSTICK CONFIGURATION & LAYOUTS — SUMMARY

1. JOYSTICK (FLOATING)

The joystick lives in a designated activation zone (e.g. bottom-left). When the player touches inside the zone, the joystick spawns at the touch point and becomes the input center. Thumb drag = directional input; thumb lift = joystick fades back to ~40% opacity and re-anchors.

IDLE **ACTIVE** **RELEASE**

2. DIRECTIONAL INPUT

8-way detection (up, down, left, right, and four diagonals). Essential for command inputs like quarter-circle forward and half-circle back.

UP, UP-RIGHT, RIGHT, DOWN-RIGHT, DOWN, DOWN-LEFT, LEFT, UP-LEFT

3. DEAD ZONE

~15% of the outer ring radius registers no input. Prevents drift and accidental moves.

~15% DEAD ZONE

4. PERFORMANCE & RESPONSIVENESS

- <50ms latency from touch to in-game action.
- Input buffering (a short queue window) makes combos feel responsive.

<50ms LATENCY TARGET

5. LAYOUT SWAP (DOUBLE-ARROW BUTTON)

One tap mirrors the entire HUD across the vertical axis. No settings menu, no friction. Player's choice persists across sessions via local storage.

6. LAYOUTS (HUD MIRRORED)

LAYOUT A (RIGHT-HANDED, DEFAULT)

LAYOUT B (LEFT-HANDED, MIRRORED)

MIRROR (vertical axis)

ELEMENT	LAYOUT A (RIGHT-HANDED, DEFAULT)	LAYOUT B (LEFT-HANDED, MIRRORED)
JOYSTICK ZONE	Bottom-LEFT	Bottom-RIGHT
ACTION BUTTONS	Bottom-RIGHT	Bottom-LEFT
MENU BUTTON	Mid-RIGHT edge	Mid-LEFT edge
SWAP BUTTON	Bottom-RIGHT corner	Bottom-LEFT corner

★ DESIGN PRINCIPLE Layout B is a pure horizontal flip of Layout A — same elements, mirrored positions. Muscle memory transfers cleanly, which matters in a fighter where execution speed counts.

GAME PLAY

Use the game play section to create a descriptive paragraph about how the game is played.

The player launches LuchaDog on their phone and is matched into a 30-second 1v1 duel. The screen shows a small forest arena with a stone-tile path running vertically through it. The player's orange/red knight always stands at the bottom; the rival's blue knight always stands at the top. A wood-trimmed HUD across the top shows the player's health bar on the left, a countdown timer in the center, and the rival's health bar on the right. The left thumb pushes the joystick to move; the right thumb taps the fist button to punch with a snappy anticipation-and-release motion, the chevron button to dash with brief invulnerability frames, and a support rail on the right edge to drink a potion (instant heal) or summon a Flame Imp pet (fights alongside the player for six seconds). Hits land with a screen shake, a brief hit-stop, and floating damage numbers; about one in five strikes is a CRIT for more than double damage. The rival fights back the entire time. The player who reduces the other's HP to zero before the timer runs out wins by Knock-Out; if the clock reaches zero, whoever has more HP wins by Decision; tied HP is a Draw. Matches feel sharp, readable, and over fast — the loop is tap, dodge, punish, heal, regroup, finish.

Game Play Outline

This outline will vary depending on the type of game.

- **Opening the game application:** Splash screen → main menu offering Play (matchmaking), Practice (vs AI), Cosmetics, Settings, and Quit. A short tutorial overlay plays on first launch.
- **Game options:** Audio sliders, joystick sensitivity, fixed vs floating joystick toggle, performance mode (30 / 60 FPS), reduce-motion toggle, account sign-in.
- **Story synopsis:** Two knights of opposing orders meet on an ancient forest path. Each match is a single, short, decisive bout.
- **Modes:** Quick Match (default online 1v1), Ranked, Practice (vs AI), and post-launch Daily Challenge.
- **Game elements:** Two symmetrical knights (player and rival), a summonable Flame Imp pet, the forest arena, and the HUD.
- **Game levels:** MVP ships with one arena — 'The Forest Path.' Post-launch arenas will be cosmetic-only variants.
- **Player's controls:** Left thumb on the joystick. Right thumb on the attack button, dash button, and support rail (potion and pet). Thumbs never cross sides.
- **Winning:** Reduce the rival's HP to 0 before time runs out (KO), OR have more HP than the rival when the timer hits 0 (Decision).
- **Losing:** Player's HP reaches 0 (KO loss), OR player has less HP than the rival when the timer hits 0 (Decision loss).
- **End:** Result screen with 'Fight Again' or back-to-menu option. Ranked matches award/deduct rating; casual matches award XP and coins.
- **Why is all this fun?** Matches are short, decisive, and over in 30 seconds. Controls are immediately readable. Combat has weight thanks to anticipation, impact, hit-stop, and crits. Easy to pick up, hard to master.

Key Features

Key features are a list of game elements that are attractive to the player.

- 30-second 1v1 duels — built for short, intense, mobile-friendly sessions.
- Portrait, thumb-native controls: joystick left, all actions right.
- Rubber-hose / vintage-cartoon style with heavy squash-and-stretch animation.
- Three-phase melee (anticipation → strike → recovery) with crits, hit-stop, and screen shake.
- Dash with invulnerability frames — doubles as gap-closer and dodge.
- Two distinct support actions: instant Potion heal and a summonable Pet companion.
- Multiple victory paths — Knock-Out, Decision, or Draw.
- Locked spatial rule: player is always bottom, rival is always top.
- Cosmetic-only monetization (Battle Pass + VIP + skin/pet shop) — no pay-to-win.
- Pet acquisition via earnable eggs (free) and direct purchase (paid) — no gacha.
- Built for online matchmaking with future ranked, practice, and daily challenge modes.

DESIGN DOCUMENT

This document describes how GameObjects behave, how they're controlled, and their properties.

Design Guidelines

This is an important statement about any creative restrictions that need to be considered and includes brief statements about the general goal of the design.

- **Spatial rule (locked):** the player's knight is always at the bottom of the screen; the rival is always at the top.
- **Fixed camera (locked):** no panning, no zooming, no cuts during gameplay.
- **Two-thumb separation (locked):** movement is left-thumb only; actions are right-thumb only.
- **No card mechanics, no decks, no mid-match menus:** this is a real-time duel.
- **Readable feedback for every action:** every input and every event produces immediate visual / audio feedback.
- **Match length is short on purpose:** 30 seconds.
- **Art style commitment:** rubber-hose cartoon energy — squash-and-stretch, thick ink outlines, expressive pie-cut eyes, exaggerated motion.
- **Performance:** 60 FPS target on mid-tier mobile; never below 30 FPS on entry-level devices.
- **Monetization (locked):** cosmetic-only. No paid stat upgrades, no power progression, no gacha or loot boxes. Competitive integrity is non-negotiable.

Game Design Definitions

This section establishes the definition of the game play. Definitions should include how a player wins, loses, transitions between levels, and the main focus of the gameplay.

- **How the player wins:** Reduce the rival's HP to 0 before the timer expires (KO), OR have strictly more HP than the rival when the timer reaches 0 (Decision).
- **How the player loses:** Player's HP reaches 0 (KO loss), OR player has strictly less HP than the rival when the timer reaches 0 (Decision loss).
- **Draw condition:** Timer reaches 0 and both fighters have equal HP.
- **Transitions:** Main Menu → Matchmaking → Match (READY → FIGHT! → 30s → Result) → Result Screen → Fight Again or Back to Menu.
- **Main focus of gameplay:** Spacing and timing in a short PvP brawl.

Game Flowchart

The game flowchart provides a visual of how the different game elements and their properties interact.

- **Menu:** App launch → splash → main menu hub. Selecting Play triggers matchmaking.
- **Synopsis:** Brief loading screen showing both knights silhouetted against the arena.
- **Game Play:** 'READY' → 'FIGHT!' → timer counts down. Each frame updates positions, animations, HP.
- **Player Control:** Inputs read every frame. Each input is gated by its own state machine.
- **Game Over:** Triggered on HP=0 or timer=0. Result overlay → 'Fight Again' or Back to Menu.

Player Definition

Use this section for quick descriptions that define the player.

- Both fighters use identical mechanics in the MVP — only differences are screen position and cosmetic palette. Symmetry ensures the matchup is purely skill-based.

Player Definitions

A suggested list may include: Health, Weapons, Actions

- **Health:** 100 HP at match start. Cannot exceed 100. At 0 HP the fighter is defeated.
- **Weapons:** Melee punch — short-range three-phase strike. Base damage 8–12, ~18% CRIT chance for ~2.2× damage.
- **Actions:** Move (joystick), Attack (punch), Dash (mobility/dodge with i-frames), Potion (heal), Pet (summon Flame Imp).

Player Properties

Each property should mention a feedback as a result of the property changing.

- **HP:** 100/100. Reduced by attacks and burn DOT. Feedback — HP bar animates down, hit flash, knockback, damage floater, screen shake.
- **Move speed:** 95 units/sec, scales with joystick magnitude.

- **Attack cooldown:** 0.42s total cycle. Feedback — attack button greys out during recovery.
- **Dash cooldown:** 2.5s.
- **Potion cooldown:** 11s.
- **Pet cooldown / duration:** Pet lives 6s, then 18s cooldown.
- **Burn:** 2 damage/0.4s for 2s.
- **Invulnerability:** 0.32s during dash.

Player Rewards (power-ups and pick-ups)

Make a list of all objects that affect the player in a positive way (e.g., health replenished).

- Red Tails does not use spawning pickups on the arena floor. The player has on-demand support actions accessible from the right-side rail.
- **Potion:** Restores 30 HP instantly. 11s cooldown.
- **Pet (Flame Imp):** Summons a flame-imp companion for 6s. Lunges at the rival, dealing 8–12 damage per hit and applying burn. 18s cooldown.
- **Dash:** Built-in mobility. Bursts player in joystick direction with 0.32s i-frames. 2.5s cooldown.

User Interface (UI)

This is where you'll include a description of the user's control of the game.

The UI is fully overlaid on the gameplay screen. There are no menus or transitions during a match. Layout is portrait-only and thumb-native.

Top zone (~10% of screen height) — HUD bar:

- Top-left: 'YOU' label and player's HP bar (orange/red gradient).
- Top-center: 'TIME' label and countdown timer (cream, gold glow; red and pulsing under 10s).
- Top-right: 'RIVAL' label and rival's HP bar (cyan/teal gradient).

Middle zone (~60% of screen height) — the arena:

- Forest playfield with the stone-tile path running vertically.
- Player knight at the bottom, rival knight at the top.

Bottom zone (~30% of screen height) — controls:

- **Bottom-left — Joystick:** ~132px circular pad with draggable knob (olive-green translucent).
- **Bottom-right — Attack button:** ~132px circular pad with white cartoon-fist icon.
- **Above-left of Attack — Dash button:** ~80px circular pad with chevron arrows (blue variant).
- **Right edge, upper — Potion button:** ~60px wood-rimmed circular button with flask icon.
- **Right edge, lower — Pet button:** ~60px wood-rimmed circular button with flame icon.

Overlay UI:

- 'READY → FIGHT!' banner at match start.
- 'VICTORY' / 'DEFEAT' / 'DRAW' result screen at match end.

META-GAME

Everything outside the 30-second match — the systems that retain players between fights, give them goals to chase, and connect each match to long-term progression.

Meta-Game Loop

The repeating cycle a player goes through between matches.

- **1. Play a match:** Win, lose, or draw a 30-second 1v1.
- **2. Earn rewards:** Coins, Battle Pass XP, mission progress, occasional pet eggs and skin drops. Ranked matches also adjust rating.
- **3. Level up:** Account level, Battle Pass tier, Knight Mastery — all cosmetic-tied.
- **4. Customize:** Spend earned currency or claimed rewards on new knight skins, pets, arena themes, emotes, banners. Hatch any pet eggs earned.
- **5. Re-enter the queue:** With new cosmetics equipped. The loop repeats.

Progression Philosophy

The rules governing what players can earn and unlock.

- All gameplay-affecting stats are identical between players. No equipment system, no skill tree, no card upgrades, no character power levels.
- Progression is entirely cosmetic and reputational: skins, pets, arenas, emotes, banners, ranked rating, account level.
- Earned and purchased cosmetics are functionally interchangeable — paid skins do NOT confer any in-match advantage.
- Players who never spend money can still earn most cosmetics through play, Battle Pass free track, rotating coin shop, and the pet egg system.
- Premium-only cosmetics exist (Battle Pass exclusives, gem-only items, VIP variants) — aspirational but never advantageous.

Currencies

All player-facing currencies, what earns them, and what they buy.

- **Coins (soft currency):** Earned from playing matches, daily missions, and Battle Pass free track. Spent on Common and Rare cosmetics in the rotating shop.
- **Gems (premium currency):** Purchased with real money in gem packs. Earned occasionally as Battle Pass premium rewards. Spent on Battle Pass, VIP, Epic/Legendary skins, bundles.
- **Battle Pass XP:** Non-fungible progression points earned per match and per mission. Resets each 30-day season.
- **Mastery Points:** Per-skin or per-pet progression. Earned by winning matches with that cosmetic equipped. Unlocks visual upgrades (gold variant, victory pose, banner).

Player Level / Mastery

Two parallel progression tracks, both cosmetic.

- **Account Level:** Increases with total match XP. Each level grants a small coin bonus and profile flair.
- **Ranked Rating:** Adjusted only in Ranked mode. Seasonal reset. Top tiers (Diamond, Master, Legend) award seasonal banner + emote.
- **Knight & Pet Mastery:** Per-cosmetic progression. Mastery 1/2/3 unlocks: gold-trim variant → unique victory pose → unique nameplate frame.

CUSTOMIZATION & UNLOCKS

What players can change about their knight, pet, and presentation. All cosmetic.

Knight Skins

Visual reskins of the player's knight. Identical gameplay; different visuals.

- Tiered rarity: Common (palette swaps), Rare (new helmet/armor shape), Epic (full visual overhaul), Legendary (unique animations + particles + victory pose).
- Acquisition: rotating coin shop, Battle Pass, direct gem purchase, seasonal Ranked rewards.
- Example MVP set: Default Knight, Cyber-Knight, Samurai, Gladiator, Undead, Golden, Pumpkin (seasonal), Festive (seasonal).
- Each skin includes idle pose, walk cycle, attack animation, dash trail color, victory pose. Higher rarities add unique attack VFX.

Pets

Visual variants of the summonable companion. Identical behavior; different visuals. See PET STORE section below for acquisition details.

- MVP includes the default Flame Imp. Variants ship in seasonal drops and bundles.
- Pet variants: Frost Imp (blue, ice particles), Storm Imp (purple, lightning), Shadow Imp (smoke), Bunny (pink), Tiny Dragon (legendary).
- All variants are functionally identical: 6s duration, 18s cooldown, 8–12 damage per hit, applies burn (or visually-themed equivalent of equal PvP value).

Arena Skins

Visual reskins of the playfield. Identical layout.

- MVP arena: 'The Forest Path' (default).
- Post-launch arenas: Desert Ruins, Frozen River, Lantern-Lit Dojo, Cyberpunk Alley, Volcano Lair.
- Acquisition: gem purchase, Battle Pass premium track, seasonal events.
- Ranked uses a curated rotation to maintain a level playing field.

Emotes & Taunts

Quick-tap cosmetic gestures during a match.

- Players equip up to 4 emotes in a wheel.
- Examples: 'GG', 'Easy', '?', Thumbs Up, Bow, Laugh, Salute, Crying, Heart.
- Acquisition: coin shop (basic), Battle Pass, gem store (premium animated).
- Can be muted by the opponent.

Banner & Nameplate

Profile-level cosmetics shown to the opponent at match start and on the leaderboard.

- Banner: background art behind the player's name.
- Nameplate frame: decorative border around the name.
- Title: tagline shown under the name.
- Acquisition: account level rewards, Mastery unlocks, Ranked rewards, Battle Pass, events

MONETIZATION

How Red Tails generates revenue. All offerings are cosmetic.

Monetization Philosophy

Non-negotiable principles for all paid offerings.

- Cosmetics only. No paid stat upgrades.
- No gacha. No randomized rewards behind a paywall. Players always know exactly what they are buying.
- Direct purchase, predictable pricing.
- Free-to-play is fully viable.
- No 'energy' gate on playing matches.

Battle Pass

The primary monetization product. A 30-day seasonal track.

- **Season length:** 30 days. New season begins immediately after the previous ends.
- **Tiers:** 50 tiers per season. Progress earned through match XP and mission completion.
- **Free Track:** Coins, basic emotes, 1 Common skin, banners, Common + Rare pet eggs at milestone tiers. Roughly 20% of total season value.
- **Premium Track (\$9.99):** Exclusive seasonal Epic knight skin (Tier 50), seasonal pet variant, gems, premium emotes, exclusive banner. ~80% of season value.
- **Premium+ (\$19.99):** Premium track + 20 instant tier skips + exclusive Legendary skin variant.
- **Catch-up:** Players who buy the pass partway through the season automatically receive all rewards earned up to their current tier.

VIP Subscription

A monthly recurring subscription. Cosmetic and convenience benefits only — never gameplay.

- **Price:** \$4.99 / month, auto-renewing.
- **Daily Login Bonus:** +50% coins per daily login while active.
- **Mission Slots:** +1 extra daily mission slot.
- **VIP Profile Badge:** Gold badge on profile and shown to opponent at match start.
- **Monthly Exclusive Skin:** A different VIP-only skin or pet variant each month. Kept permanently.
- **Battle Pass XP Boost:** +10% XP toward tier progress.
- **Monthly Emote Pack:** 4 exclusive VIP emotes per month.
- **Priority Queue:** Slightly faster matchmaking during peak hours.
- **No gameplay advantages:** VIP never alters stats, damage, cooldowns, or in-match mechanics.

Cosmetic Shop

The browseable storefront for direct cosmetic purchases.

- **Featured Bundle:** Rotates weekly. A themed pack (skin + pet + emote + banner) at a discount.
- **Daily Deals:** 3 rotating items refreshed every 24 hours.
- **Gem Packs:** \$0.99 = 80 gems, \$4.99 = 500 gems, \$9.99 = 1100 gems, \$19.99 = 2400 gems, \$49.99 = 6500 gems, \$99.99 = 14000 gems.
- **Catalogs:** Browseable grids for Knight Skins, Pets (see Pet Store section), Arenas, Emotes.

Starter Pack & Bundles

One-time offers timed to engagement moments.

- **Starter Pack (\$4.99, one-time):** 7 days after first match. Rare skin + Pet Variant + 500 gems + 10,000 coins.
- **Rank-Up Bundles:** Discounted bundles unlocked at first-time Gold/Platinum/Diamond rank.
- **Seasonal Event Bundles:** Halloween, Lunar New Year, Summer, etc.

Re-engagement Offers

Offers shown to lapsed players.

- **Welcome Back Bundle:** Returns after 7+ days inactivity. Free coins, gem boost, a Rare Pet Egg, limited-time exclusive emote.
- **Daily Login Streak:** Returning players get accelerated daily rewards for the first 7 days back.

Collaboration & Licensed Cosmetics

A major long-term monetization strategy for **LuchaDogs** is collaboration content with companies, media brands, creators, and recognizable characters. These collaborations allow players to buy skins and cosmetics based on brands, shows, games, films, influencers, or characters they already love.

Collaboration cosmetics are designed to create excitement, increase player engagement, and bring new audiences into the game while still following Red non-negotiable monetization rules.

LUCHADOG x AVATAR: THE LAST AIRBENDER

COLLABORATION PROPOSAL

THEY HAVE
A world loved by millions. Iconic characters, elements, and stories that span generations.

THE IP
A rich universe of heroes, nations, and elemental mastery.

WHY IT WORKS
• A timeless IP with global appeal.
• A unique 1930s rubber-hose interpretation your fans have never seen.
• In-game events, battle passes, and cosmetics that engage players for the long term.

WE BRING IT TO LIFE IN OUR WORLD
Reimagined in our 1930s rubber-hose art style.

POTENTIAL CONTENT
• Battle Pass Season "Four Nations"
• Elemental Pet Variants (Spirit, Sky Bison Cub, Fire Ferret)
• Exclusive Emotes & Banners
• Limited-Time Event Modes
• Co-Branded Bundles & Offers

BENEFITS
• New audience reach through gaming.
• Long-tail monetization through cosmetics.
• A-geloved IP in a fresh, shareable style.

IN-GAME EXAMPLES
AANG KATARINA ZUKO TOPH APPA
KNIGHT SKIN PET ARENA EMOTE BANNER
AANG SLURP MOOMO SOUTHERN WATER TRIBE HONORI WHITE LOTUS

TOGETHER, WE CREATE A FUN, FRESH WAY FOR FANS TO EXPERIENCE AVATAR INSIDE A COMPETITIVE PVP WORLD.

LUCHADOG x FORMULA 1®

COLLABORATION PROPOSAL

THEY HAVE
The pinnacle of motorsport. Speed, precision, innovation and a global fanbase.

THE IP
Iconic teams, drivers, and the world's most exciting racing series.

WHY IT WORKS
• Brings F1 to a new generation of mobile gamers.
• A playful, retro style that stands out.
• Creates excitement around races, seasons and events inside the game.

WE BRING IT TO LIFE IN OUR WORLD
Reimagined in our 1930s rubber-hose art style.

POTENTIAL CONTENT
• Battle Pass Season "Grand Prix"
• Team & Driver Skins
• Car, Helmet & Pit Crew Pet Variants
• Race-Themed Arenas
• Live Ops Around Real-World Races

BENEFITS
• Increased brand engagement.
• High visibility in a fast-growing market.
• Long-term partnership opportunities.

IN-GAME EXAMPLES
DRIVER PIT CREW F1 CAR F1T
KNIGHT SKIN PET ARENA EMOTE BANNER
DRIVER SUIT TINY PIT BOT MARINA CIRCUIT POLE POSITION CHECKERED FLAG

LET'S PUT THE THRILL OF FORMULA 1® INTO PLAY. FAST, FUN, AND UNFORGETTABLE.

LUCHADOG x [SOCCER CLUB]

COLLABORATION PROPOSAL

THEY HAVE
A legendary club with history, passion, and millions of fans worldwide.

THE IP
A iconic badge, colors, players, and an unmatched football culture.

WHY IT WORKS
• Combines the love of football with mobile gaming.
• Players can represent their club in a whole new way.
• Seasonal content keeps the community engaged.

WE BRING IT TO LIFE IN OUR WORLD
Reimagined in our 1930s rubber-hose art style.

POTENTIAL CONTENT
• Battle Pass Season "Club Glory"
• Player & Mascot Skins
• Ball & Jersey Variants
• Stadium Arenas
• Matchday Events & Challenges
• Co-Branded Bundles

BENEFITS
• Stronger connection with younger fans.
• Global exposure for the club.
• Revenue through in-game cosmetics & events.

IN-GAME EXAMPLES
PLAYER GOALKEEPER MASCOT BALL
KNIGHT SKIN PET ARENA EMOTE BANNER
Club Kit Club Mascot Stadium GOOOOAL! CLUB CREST

TOGETHER, WE BRING YOUR CLUB TO THE PVP ARENA. PRIDE. PASSION. PLAY.

LUCHADOG x FINAL FANTASY®

COLLABORATION PROPOSAL

THEY HAVE
A legendary RPG series with unforgettable characters, worlds and music.

THE IP
Iconic heroes, summons, spells, and timeless adventures.

WHY IT WORKS
• A fresh, nostalgic take fans have never seen.
• Deep character roster means endless possibilities.
• Events and cross-promos that celebrate the FF legacy.

WE BRING IT TO LIFE IN OUR WORLD
Reimagined in our 1930s rubber-hose art style.

POTENTIAL CONTENT
• Battle Pass Season "Echoes of Fantasy"
• Character Skins
• Summon Pet Variants
• Spell Effect Customizations
• Classic Locations as Arenas
• Co-Branded Bundles

BENEFITS
• Reaches both retro and new generations.
• Premium content with lasting appeal.
• Stronger IP relevance in mobile gaming.

IN-GAME EXAMPLES
CLOUD BLACK MAGE MOOGLE CHOCOBO
KNIGHT SKIN PET ARENA EMOTE BANNER
CLOUD MINI CHOCOBO MORGAR PLATFORM LET'S RIDE! METERIC ICON

TOGETHER, WE BRING FINAL FANTASY® TO THE ARENA IN A STYLE THAT'S TIMELESS, PLAYFUL, AND ICONIC.

Collaboration Philosophy

All collaboration content must follow the same principles as every other paid item in Red Tails.

- **Cosmetic only.** Collaboration skins never provide stat boosts, damage increases, faster cooldowns, or gameplay advantages.
- **Direct purchase.** Players always know exactly what they are buying. No randomized paid collaboration rewards.
- **Brand-safe and game-appropriate.** Collaborations must fit the tone, audience, and fantasy style of Red Tails.
- **Player demand comes first.** Partnerships are chosen based on what players actually want to see as skins, pets, emotes, banners, or arenas.
- **Clear availability.** Limited-time collaboration items clearly show when they enter and leave the shop.
- **Permanent ownership.** Once purchased, players keep collaboration cosmetics permanently unless legal licensing terms require otherwise.

Types of Collaborations

LuchaDogs can collaborate with different categories of partners.

- **Media Collaborations:** Skins based on movies, shows, comics, anime, or streaming series.
- **Game Collaborations:** Knight skins, pets, banners, and arenas inspired by other games or gaming brands.
- **Character Collaborations:** Famous characters redesigned in the Red Tails knight style.
- **Creator Collaborations:** Influencer, streamer, or esports-themed skins and emotes.
- **Company Collaborations:** Branded cosmetic bundles with companies that match the game's audience and style.
- **Event Collaborations:** Limited-time crossover events tied to holidays, premieres, tournaments, or major cultural moments.

Collaboration Bundles

Collaboration content is usually sold as direct-purchase bundles in the Cosmetic Shop.

Example bundle structure:

- Collaboration Knight Skin
- Matching Pet Variant
- Exclusive Emote
- Player Banner
- Profile Badge
- Optional Arena Skin
- Optional Finisher Animation, cosmetic only

Collaboration bundles can be offered at different price points depending on the size and value of the crossover.

- **Mini Collaboration Bundle:** Skin + banner + emote
- **Standard Collaboration Bundle:** Skin + pet + emote + banner
- **Premium Collaboration Bundle:** Legendary skin + pet + arena + emotes + profile badge

Collaboration Decision Strategy

Red Tails chooses collaboration partners based on a clear decision process.

- **Player Interest:** Would players actually want this skin or character?
- **Visual Fit:** Can the character or brand be redesigned naturally into the Red Tails knight style?
- **Audience Match:** Does the partner appeal to the same type of players Red Tails wants to attract?
- **Cultural Relevance:** Is the collaboration tied to something timely, popular, or exciting?
- **Cosmetic Potential:** Can the partner support multiple cosmetic items, not just one skin?
- **Legal Feasibility:** Can the rights, licensing, approvals, and revenue share be handled cleanly?
- **No Gameplay Conflict:** The collaboration must never affect competitive balance.

Community-Driven Collaboration Voting

To make collaboration choices feel player-driven, Red Tails may allow the community to vote on future collaboration themes.

Examples:

- "Which media crossover should come next?"
- "Which character should become a knight skin?"
- "Which creator should receive a Red Tails cosmetic bundle?"
- "Which pet collaboration would you like to see?"

This gives players emotional investment in the shop and helps the team understand which skins have the strongest demand before signing partnerships.

Limited-Time Collaboration Events

Some collaborations may launch as limited-time events.

- Event missions reward free cosmetics such as banners, coins, emotes, or profile badges.
- Paid collaboration skins are sold directly in the shop.
- No randomized paid rewards are used.
- Free players still receive event rewards and can participate fully.
- Collaboration events can include themed menus, arenas, music, or limited-time challenges.

Collaboration cosmetics generate revenue through direct purchases, bundles, and limited-time event offers. Revenue may be shared with the partner depending on the licensing agreement.

Potential revenue sources:

- Direct collaboration skin sales
- Premium collaboration bundles
- Event cosmetic packs
- Creator-code revenue sharing
- Co-branded seasonal Battle Pass rewards
- Sponsored cosmetic drops

Even with partner involvement, Red Tails keeps the same player-friendly monetization rules: no pay-to-win, no gacha, and no hidden purchases.

PET STORE & ACQUISITION

How players discover, collect, and acquire pet companions. Builds on the cosmetic-only philosophy with two parallel paths: earning eggs through gameplay (free) and direct purchase (paid). All acquisition is fully deterministic — never gacha.

Pet Acquisition Philosophy

The rules governing how players obtain new pets.

- No gacha. No randomized loot boxes. Players always know exactly which pet they are getting before they commit any action to acquire it.
- Two parallel paths: free (earn eggs through play) and paid (direct gem purchase). Both lead to the same pets; the only differences are speed of acquisition and access to limited-time variants.
- Eggs are a delivery mechanic, not a randomization mechanic. Each named egg type contains one specific named pet — the egg is packaging that makes claiming feel fun, not a slot machine.
- New pets release on a regular cadence (one per season minimum) so there is always something to chase.
- All pets are functionally equivalent in PvP. A free-earned pet is as competitive as a premium-bought one.

Pet Eggs

The wrapper for earned and gifted pets. Always deterministic.

- Each egg has a fixed pet inside, named on the egg's label. Example: 'Frost Imp Egg' → Frost Imp.
- Eggs hatch instantly when the player taps 'Hatch,' with a satisfying crack + reveal animation. No wait timers.
- Egg rarity tiers (Common / Rare / Epic / Legendary) indicate the rarity of the pet inside — but the pet itself is always explicitly named on the egg.
- Eggs stack in an inventory section of the Pet Store and can be hatched at any time.
- Duplicate protection: receiving an egg for a pet you already own auto-converts it to a small pile of coins (Common) or Mastery Points (Rare+) for that pet.

Free Egg Sources (no purchase required)

How players earn eggs through play.

- **Battle Pass Free Track milestones:** Tier 10 (Common Pet Egg), Tier 25 (Rare Pet Egg), Tier 40 (Epic Pet Egg). Available to all players, not just Premium Pass holders.
- **Account level-up rewards:** Every 5 account levels → Common Pet Egg. Every 25 levels → Rare Pet Egg.
- **Daily Mission weekly summary:** Completing all 7 days of daily missions in a week awards a Common Pet Egg.
- **Welcome Back bundle:** Lapsed players (7+ days inactive) return to a free Rare Pet Egg.

- **Event clears:** Completing a seasonal event awards an event-themed Pet Egg with a specific themed pet.
- **Ranked rewards:** End-of-season Ranked rewards include eggs scaled to peak tier reached.

Paid Acquisition (gem purchase)

Direct purchase options for players who want a specific pet immediately.

- **Direct pet purchase:** Any pet in the catalog can be bought outright for gems. Common = 200 gems, Rare = 500, Epic = 1,200, Legendary = 2,500.
- **Pet Bundles:** Themed packs combining a pet + gems + coins + matching banner, at a discount vs. direct purchase. Example: 'Storm Bundle' = Storm Imp + 500 gems + 5,000 coins + Storm banner for \$9.99.
- **Egg purchase:** Common Egg = 100 gems, Rare = 300, Epic = 700. Slightly cheaper than direct purchase but still deterministic — the egg's label always says which pet is inside.
- **Limited Event Eggs:** During seasonal events, a themed Event Egg becomes available — purchasable only during the event window. Always shows the specific event-themed pet inside.
- **Battle Pass Premium track:** Premium Pass holders receive an exclusive seasonal pet variant at Tier 50.
- **VIP monthly drop:** VIP subscribers receive an exclusive pet variant each month they remain subscribed.

Pet Store Screen

A dedicated storefront accessible from the Loadout tab (Pet sub-tab → 'Get More Pets' button) or from the main Shop tab (Pets category).

- **Featured Pet (top of screen):** A rotating spotlight pet with full art, short description, rarity tier, and a big 'Acquire' button. Refreshes every 3 days.
- **Pet Eggs row:** Shows all egg types currently available — free-earned (with source/progress indicator) and purchasable (with gem cost).
- **Pet Catalog:** Grid of all pets in the game, sortable by rarity / theme / acquisition method. Tap any pet to see its detail card (animations, particles, lore blurb, price).
- **Pet Bundles:** Themed packs and seasonal limited-time offers. Each bundle clearly lists contents and total value vs. price.
- **Inventory shelf:** Section at the bottom showing the player's currently-owned pets and any unhatched eggs in storage. Tapping an egg opens the hatch animation.
- **Currency display:** Gem balance visible top-right with a '+' button to top up via Gem Pack purchase.

Pet Variants (Mastery rewards)

A cosmetic upgrade layer on top of owning a pet. Earned through play, not sold separately.

- A 'variant' is an alt visual for a pet you already own — different colors, different particles, different sound effects.

- Example: Flame Imp's variants might be Golden Flame Imp (Mastery 1), Cursed Flame Imp (Mastery 2), Champion Flame Imp (Mastery 3).
- Variants are earned via Pet Mastery (winning matches with that pet equipped), Battle Pass exclusives, or VIP monthly drops.
- Variants are NOT sold directly. This protects the value of Mastery as a player flex.

Pricing Summary Reference

Quick reference for the developer balancing the economy.

- **Common Pet:** 200 gems direct, OR earnable via free Battle Pass / level-up / mission summary.
- **Rare Pet:** 500 gems direct, OR earnable via free Battle Pass Tier 25 / Welcome Back / account level 25+.
- **Epic Pet:** 1,200 gems direct, OR earnable via free Battle Pass Tier 40 / event clears.
- **Legendary Pet:** 2,500 gems direct, OR earnable via end-of-season Ranked rewards (Diamond+).
- **Pet Bundle:** \$4.99 to \$19.99 USD, always with a 30–50% discount vs. direct purchase.

PET STORE & ACQUISITION

HOW PLAYERS DISCOVER, COLLECT, AND ACQUIRE PET COMPANIONS

Two parallel paths. Fully deterministic. Cosmetic only. No pay-to-win.

PET ACQUISITION PHILOSOPHY

- No gacha. No randomized loot boxes. You always know exactly which pet you are getting before you commit.
- Two parallel paths: free (earn eggs through play) and paid (direct gem purchase). Both lead to the same pets.
- Eggs are a delivery mechanic, not a randomization mechanic. Each named egg contains one specific, named pet.
- New pets release on a regular cadence (one per season minimum) so there is always something to chase.
- All pets are functionally equivalent in PvP. A free-earned pet is as competitive as a premium-bought one.

PET VARIANTS (MASTERY REWARDS)

Variants are alternate visuals for pets you already own. Earned through play. Not sold.

FLAME IMP (BASE)

GOLDEN FLAME IMP (MASTERY 1)

CURSED FLAME IMP (MASTERY 2)

CHAMPION FLAME IMP (MASTERY 3)

Earn variants via Pet Mastery (win matches with that pet equipped). Battle Pass exclusives, or VIP monthly drops.

Variants are NOT sold directly. This protects the value of Mastery as a flex.

DUPLICATE PROTECTION EXAMPLES

YOU RECEIVE FROST IMP EGG (RARE)

ALREADY OWNED → CONVERTED TO: 1,000 COINS

YOU RECEIVE SHADOW BAT EGG (EPIC)

ALREADY OWNED → CONVERTED TO: 250 MASTERY POINTS

PET EGGS (ALWAYS DETERMINISTIC)

Each egg has a fixed pet inside, named on the egg's label. Example: "Frost Imp Egg" → Frost Imp.

Eggs hatch instantly with a satisfying crack + reveal animation. No timers.

Rarity tiers (Common / Rare / Epic / Legendary) indicate the rarity of the pet inside — but the pet is always explicitly named on the egg.

Eggs stack in your inventory and can be hatched at any time.

Duplicate protection: duplicates convert to coins (Common) or Mastery Points (Rare+) for that pet.

ALL COSMETIC. NO PAY-TO-WIN.

COLLECT. CUSTOMIZE. SHOW OFF.

MAIN MENU LAYOUT

The hub screen players see when not in a match. Follows the convention established by Marvel Snap, Brawl Stars, and similar competitive mobile games, themed in Red Tails' forest/wood/parchment aesthetic.

Layout Zones

The screen is divided into five zones.

- **Top Bar:** Profile avatar + level (left), three currency displays (Coins, Gems, optional Tickets), settings gear (right).
- **Left Rail:** Vertical stack of paid offers and limited-time deals.
- **Right Rail:** Vertical stack of activities and time-limited content (missions, events, leaderboard, friends, news).
- **Center Stage:** Mode selector card showing the currently selected game mode with the player's equipped knight skin and pet previewed beside it. Large PLAY button below.
- **Bottom Tab Bar:** Five tabs for the main meta-game sections. Battle is the default center tab.

Top Bar Elements

- Avatar (tap → Profile screen) with current Account Level badge.
- Player name + Rank Badge.
- Coins display with '+' button (tap → Shop).
- Gems display with '+' button (tap → Gem Pack Purchase screen).
- Settings gear icon (tap → Settings screen).

Left Rail Elements

- Battle Pass progress shortcut (current tier / 50).
- Daily Login Rewards.
- Special Shop (rotating featured bundle with countdown timer).
- Limited-Time Offer slot (Starter Pack, Welcome Back, etc.).
- VIP banner.

Right Rail Elements

- Daily Missions.
- Weekly Missions.
- Events.
- Leaderboard / Ranking shortcut.
- Friends list.
- News / Patch Notes.

Center Stage Elements

- Mode tabs (Quick Match / Ranked / Practice).
- Live preview of player's currently equipped knight skin (idle-animated).
- Pet variant displayed next to the knight.
- Currently selected arena thumbnail.
- Large PLAY button below the preview.
- Estimated queue time / online count under PLAY.

Bottom Tab Bar

Five tabs. Each shows a red notification dot when relevant.

- **Shop:** Featured bundles, daily deals, gem packs, full catalog (Knights / Pets / Arenas / Emotes).
- **Loadout:** Equip owned cosmetics. Sub-tabs for Knight / Pet / Arena / Emote / Banner.
- **Battle (DEFAULT):** The main hub (this menu).
- **Pass:** Full Battle Pass screen showing all 50 tiers.
- **Social:** Profile, friends list, challenge a friend, guild (post-launch).

SCREEN INVENTORY

Every screen the developer needs to build outside of the in-match gameplay.

Onboarding & Login

- **1. Splash Screen:** Game logo, version, brief load animation.
- **2. Login / Account Screen:** Apple Sign-In, Google Sign-In, guest play.
- **3. FTUE / Tutorial Sequence:** Scripted first match vs a dummy bot. Cannot be lost. Awards Starter Skin on completion.

Main Hub

- **4. Main Menu (Battle tab):** See 'Main Menu Layout' section.
- **5. Shop screen (Shop tab):** Featured Bundle, Daily Deals, Gem Packs, browsable sub-tabs (Knights / Pets / Arenas / Emotes / Banners).
- **6. Loadout screen (Loadout tab):** Large rotating preview. Sub-tabs for Knight / Pet / Arena / Emote / Banner.
- **7. Battle Pass screen (Pass tab):** Horizontal scrolling 50-tier track. Free + Premium rows.
- **8. Social screen (Social tab):** Profile summary, friends list, recent opponents.

Collection & Pet Store

- **9. Knight Collection:** Grid of all knight skins.
- **10. Pet Collection:** Grid of owned pets. Includes 'Get More Pets' button → Pet Store.
- **11. Pet Store:** Featured Pet, Pet Eggs row, Pet Catalog, Pet Bundles, Inventory shelf. See PET STORE section.
- **12. Arena Collection:** Grid of arena skins.
- **13. Emote / Banner Collection:** Smaller items per cell.

Purchase Flows

- **14. Gem Pack purchase screen:** Six pack tiers, native iOS / Play Store IAP chain.
- **15. VIP Subscription screen:** Marketing landing, benefit list, monthly skin preview, subscribe button.
- **16. Bundle / Offer Detail screen:** Contents, total value vs. price, buy button.
- **17. Pet Detail card:** Pop-out when tapping any pet in the catalog. Shows full animation, lore blurb, price/source, 'Acquire' button.
- **18. Insufficient Gems prompt:** Redirect to Gem Pack screen.

Match Flow

- **19. Matchmaking / Queue screen:** Animated search, estimated wait, cancel button.
- **20. Loading Screen:** Both knights shown side by side with names, ranks, titles.

- **21. Pause Menu (in-match):** Resume, Settings, Surrender, Emote panel.
- **22. Match Results screen:** VICTORY / DEFEAT / DRAW, XP, coins, Battle Pass progress, rank change, 'Fight Again' / 'Back to Menu'.

Progression & Rewards

- **23. Daily / Weekly Missions screen:** Active missions, progress bars, claim buttons.
- **24. Leaderboard / Ranking screen:** Global / Regional / Friends tabs.
- **25. Profile screen:** Stats, cosmetics owned, recent matches.
- **26. Egg Hatch screen:** Triggered when player taps an egg. Crack + reveal animation, then auto-equip prompt.
- **27. Account Level Up popup:** Modal on level increase.
- **28. Rank Up popup:** Modal on ranked tier increase.
- **29. Battle Pass Tier Unlocked popup:** Modal on tier reach, claim button.

Settings & Support

- **30. Settings screen:** Audio, Controls, Display, Account, Support, About tabs.
- **31. News / Patch Notes screen:** Scrollable update list.

Modal Popups

- Daily Login Reward popup.
- Welcome Back offer popup.
- Mission Completed toast.
- Cosmetic Equipped toast.
- Purchase Confirmation modal.
- Purchase Success modal (with reward reveal animation).
- Connection Lost modal.
- Surrender Confirmation modal.
- Friend Request popup.
- Season End popup.

NAVIGATION FLOWCHART

How players move between screens in Red Tails. This section documents the menu hierarchy (which screens contain which), the common user flows (typical paths through the game), and the overlay rules (which screens replace and which overlay).

Navigation Tree

The hierarchy of screens. Indented items are reached from the item above them. Bottom Tab Bar items are always accessible from any main hub screen.

- App Launch
 - Splash Screen (auto-advances after 2s)
 - Login / Account Screen (first time only, or after sign-out)
 - FTUE / Tutorial (first time only — scripted match vs dummy)
 - Main Menu (the default destination after any of the above)
- Main Menu (Battle tab)
 - Top Bar elements:
 - Profile Avatar → Profile screen
 - Coins '+' → Shop
 - Gems '+' → Gem Pack Purchase screen
 - Settings ⚙ → Settings screen
 - Left Rail elements:
 - Battle Pass widget → Battle Pass screen
 - Daily Login → Daily Login Reward popup
 - Special Shop → Featured Bundle Detail
 - Starter Pack (if active) → Bundle Detail
 - VIP banner → VIP Subscription screen
 - Right Rail elements:
 - Daily / Weekly Missions → Missions screen
 - Events → Event Hub screen
 - Leaderboard → Leaderboard screen
 - Friends → Social screen
 - News → News screen
 - Center Stage:
 - PLAY button → Matchmaking Queue → Match Flow (see below)
- Bottom Tab Bar (persistent across hub screens)
 - Shop tab → Shop screen
 - Featured / Daily Deals (sub-tabs)
 - Knights → Knight Catalog → Skin Detail card
 - Pets → Pet Store (see Pet Store section)
 - Arenas → Arena Catalog → Arena Detail card
 - Emotes / Banners → respective catalogs
 - Gem Packs → Gem Pack Purchase screen

- Loadout tab → Loadout screen
 - Knight sub-tab → Knight Collection (owned) → equip
 - Pet sub-tab → Pet Collection (owned) → 'Get More Pets' → Pet Store
 - Arena sub-tab → Arena Collection (owned)
 - Emote sub-tab → Emote Wheel config
 - Banner sub-tab → Banner Collection
 - Battle tab (DEFAULT) → Main Menu
 - Pass tab → Battle Pass screen
 - Tier reward tap → Claim popup → Reward reveal
 - 'Buy Premium' → Native IAP popup
 - Social tab → Social screen
 - Profile / Friends / Recent Opponents / Guild sub-tabs
- Match Flow
 - Matchmaking Queue (cancellable)
 - Loading Screen (shows both knights)
 - Match Active (the 30-second fight)
 - Pause button → Pause Menu
 - Resume → Match Active
 - Settings (limited) → back to Pause
 - Surrender → Confirmation modal → Match End (defeat)
 - Emote Wheel → back to Match Active
 - Match End (HP=0 or Timer=0)
 - Match Results screen
 - 'Fight Again' → Matchmaking Queue (loop)
 - 'Back to Menu' → Main Menu

Common User Flows

Typical sequences a player follows. Each arrow represents one screen transition.

1. Quick play (returning player): — App Launch → Splash → Main Menu → PLAY → Queue → Loading → Match → Results → Fight Again / Main Menu

2. First-time onboarding: — App Launch → Splash → Login → FTUE Tutorial Match → Main Menu → Starter Pack popup

3. Equipping a new pet: — Main Menu → Loadout → Pet sub-tab → tap owned pet → 'Equipped' toast → back

4. Buying a skin: — Main Menu → Shop → Knights → tap skin → Skin Detail → 'Buy' → Confirm → Purchase Success → auto-equip prompt

5. Buying gems: — Main Menu → tap Gems '+' → Gem Pack screen → tap pack → native IAP popup → success → updated balance

6. Buying Battle Pass: — Main Menu → Pass tab → 'Buy Premium' → native IAP → reward reveal sequence

7. Daily login: — Main Menu → Daily Login icon (left rail) → reward popup → claim animation → close → Main Menu

8. Hatching a pet egg: — Pass → Tier 10 popup → claim Common Pet Egg → Pet Store → Inventory shelf → tap egg → Hatch animation → new pet unlocked → equip prompt

9. Free pet via gameplay: — Match → win → Match Results → 'Quest Complete' (7-day streak) → Common Pet Egg added → Main Menu → Pet Store → hatch

10. Browsing the Pet Store: — Main Menu → Shop → Pets tab → Pet Store → Featured Pet OR Catalog → Pet Detail → 'Acquire' → purchase flow OR back

11. Mid-match surrender: — Match Active → Pause → Surrender → Confirmation → Match End (defeat) → Results

12. Welcome Back returning player: — App Launch → Splash → Login → Main Menu → Welcome Back popup → claim free Rare Pet Egg + bundle

Modal vs. Full-Screen Rules

Which screens replace the current view and which overlay it. Important for the developer's navigation state machine.

- **Full screens (replace view, back button returns to previous):** Splash, Login, FTUE, Main Menu, Shop, Loadout, Battle Pass, Social, all Collection screens, Pet Store, Settings, Match (gameplay), Match Results, Matchmaking Queue, Loading Screen.
- **Modals (overlay, dismissible without navigation):** Pause Menu, Surrender Confirmation, Daily Login Reward, Welcome Back Offer, Purchase Confirmation, Purchase Success, Egg Hatch reveal, Account Level Up, Rank Up, Battle Pass Tier Unlocked, Connection Lost, Insufficient Gems prompt.
- **Toasts (auto-dismissing, non-blocking):** Mission Completed, Cosmetic Equipped, Friend Request received, Reward earned, Network warning.
- **Sub-views (swap content within a screen, no nav transition):** Shop sub-tabs (Featured / Knights / Pets / etc.), Loadout sub-tabs, Battle Pass Free / Premium toggle, Social sub-tabs.

Back Navigation Rules

How the device back button (Android) and on-screen back arrow behave.

- From any Main Hub tab (Shop / Loadout / Battle / Pass / Social), back returns to the previously-visited tab. Pressing back twice in a row prompts 'Exit Red Tails?'
- From a sub-screen (e.g., Pet Detail, Skin Detail, Egg Hatch), back returns to the parent screen.
- From a modal, back closes the modal and returns to the underlying screen.
- From the Match Active screen, back has NO effect (prevents accidental quits). Use the explicit Pause button instead.
- From Match Results, back behaves the same as 'Back to Menu' (returns to Main Menu).

DEVELOPMENT PRIORITIES

Recommended order for the developer to build out the game.

- **MVP (Phase 1 — playable game):** Match loop, 1 arena, 1 knight skin (default), 1 pet (Flame Imp), local AI bot only. No monetization, no menus beyond Play and Settings. Goal: prove the fight is fun.
- **Phase 2 — Online:** Multiplayer netcode, matchmaking, queue, basic Match Results with XP and coins. Account system. Goal: prove the online experience works.
- **Phase 3 — Meta-Game:** Main menu hub, Loadout, Knight Collection, Pet Collection, Pet Store (free eggs only), basic coin shop, daily missions. Goal: give players reasons to return.
- **Phase 4 — Monetization:** Battle Pass, VIP subscription, gem packs, Pet Store paid acquisition (direct purchase + paid eggs), Starter Pack, re-engagement flows. Goal: revenue.
- **Phase 5 — Polish & Live Ops:** Ranked mode, leaderboards, seasonal events, additional arenas / skins / pet variants, social features, news system, push notifications. Goal: retention and growth.

— End of Document —
